Git for DBAs: Why, What, How

Why Git?

File shares are unreliable
Broadly accepted
Version, share, improve

- Config files
- Scripts
- Database code
- Applications

Basis for automation

Git is a distributed VCS

Git hosting options

- Github
- Bitbucket
- Gitlab
- Azure DevOps repos
- Github Gists

Using Git for database code

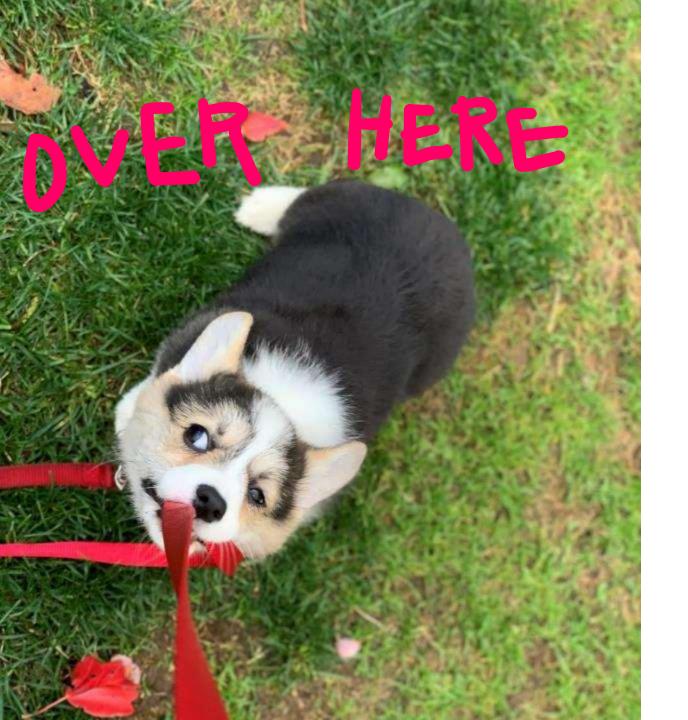

Multiple tools, some fancy

Auto generate SQL

CI/CD components

Multi-database support

Today I'm showing a simple deployment tool, Flyway

Git Repo Creation and Local Install

Demo: Create and clone your repo

Essential Git Commands

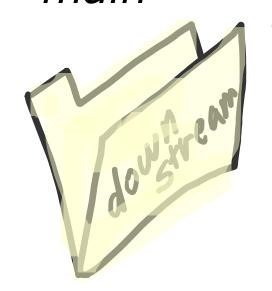

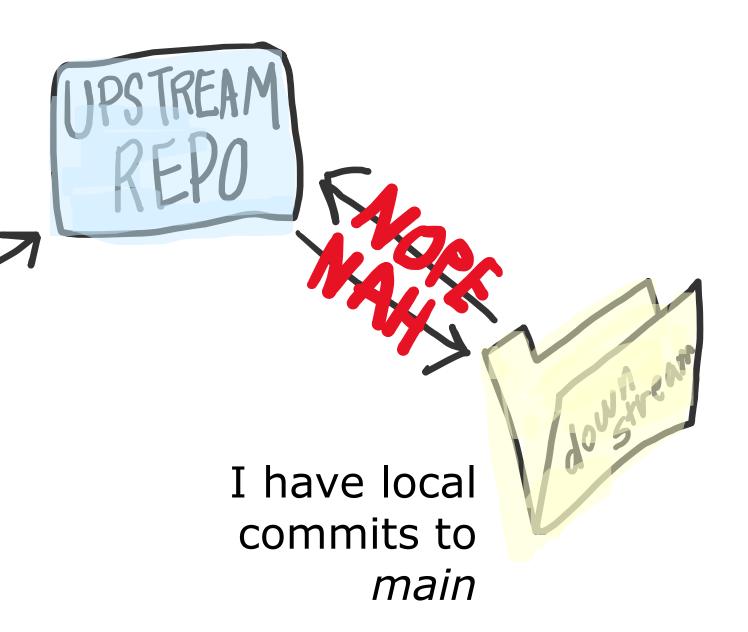

Merge is your friend

Assumption: Branching and merging sounds hard, we'll learn it later

Reality: Git is *easier* to use when you embrace branching

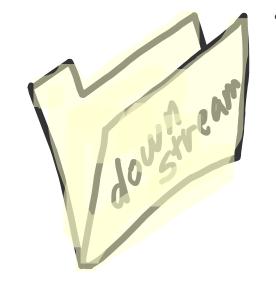

Kathi pushes commits to main

Kathi pushes commits to boop, does Pull Request to merge to main

I've committed in schmoo

I pull *main* and merge *main* into *schmoo*

I push *schmoo* and do a Pull Request to merge to main

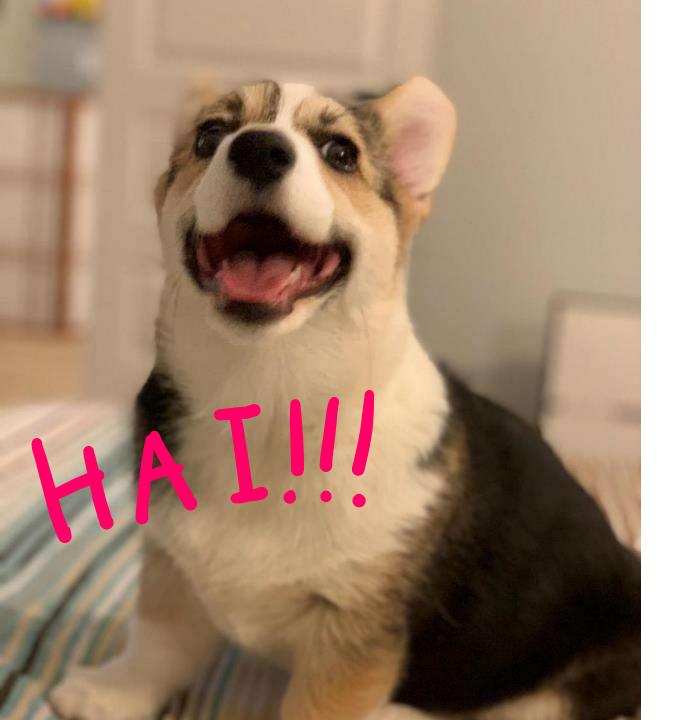

What should I use?

Git CLI – Command Line Interface

VSCode and **Azure Data Studio** (ADS) – Simple, free GUI
